Training Course Scenario Review

- **Watson's Pet Store**
 - They are a growing local store that provides pet supplies and services.
 - Their customers want to be able to order products and manage their service appointments online.

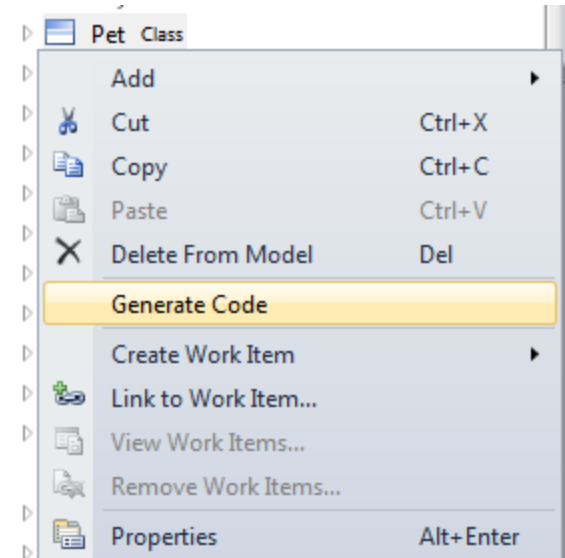

Interact with Models via UML Model Explorer

- The UML Model Explorer lets you view UML model artifacts that exist across diagrams.
 - Elements
 - Properties
 - Relationships
 - Unspecified Types
- New artifacts can be created from within the UML Model Explorer.
- The UML Model Explorer acts as a toolbox for building new diagrams and reusing model artifacts.

Generating Code from UML Models

- UML class diagram artifacts can be turned into physical representations.
 - Class (operations and attributes)
 - Struct
 - Interface
 - Enumeration
- Stereotype values impact generated code.
- Code templates can be customized.

Generating UML Models from Existing Code

- VS 2010 supports the translation of .NET types to UML entities.
 - Class
 - Struct
 - Enum
 - Interface
- Generated model elements retain a link to the originating source code.
- This feature leverages the Architecture Explorer.
- Sequence diagrams can be generated from code, but these are NOT UML sequence diagrams.

Extending the UML Model Through Profiles

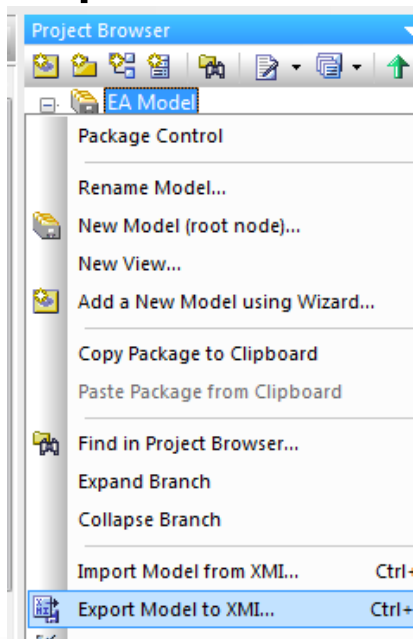

- UML models in VS 2010 can be extended in multiple ways:
 - Profiles
 - Custom Toolbox Items
 - Validation Rules
 - Menu Commands
 - Responding to Changes
 - Code Generation
 - ... and more!
- Profiles define a stereotype(s) that can be used to extend a particular elements available list of properties.
- Building a profile can be done in the Visual Studio SDK or by hand.

Qualified Name	UcModeling::Interface1
▲ Stereotypes	C# interface
▲ C# interface	
ClrAttributes	
Is Partial	False
Is Unsafe	False
Package Visibility	internal

Importing UML Models Built in Other Tools

- VS 2010 can XMI 2.1 which is a standard XML notation for describing UML models.
 - Support exists for importing sequence, class and use case diagrams
- Many external models will contain custom profiles which can be imported into a Modeling Project as well.
