SQL Prompt Refactoring

Overview

➤ **Code Refactoring**

➤ **Table Refactoring**

```
select * from dbo.People as P
exec GetNames @shortestLastName, @longestLastName
where len(P.last) between @shortestLastName and @longestLastName
```

```
create table customers1     create table customers2
(                           (
id int,                     id int,
name varchar(30)            name varchar(30),
);                          state char(2)
                            );
```
